

Linux Software

Install EPEL repo for CentOS 6

Install EPEL repo for CentOS 6

From shell -

Navigate to <https://fedoraproject.org/wiki/EPEL>

Grab the latest version of the EL6 Repo - copy it to your clipboard, and use it in the following command

```
rpm -i <pasted link>
```

Example

```
rpm -i http://mirror.us.leaseweb.net/epel/6/i386/epel-release-6-8.noarch.rpm
```

After installed, enable the testing repo, if needed. S3cmd needs the testing repo, for example

```
nano /etc/yum.repos.d/epel-testing.repo
```

Change "enabled=0" to "enabled=1"

ctrl-x to save.
